Ajocircle.

The problem

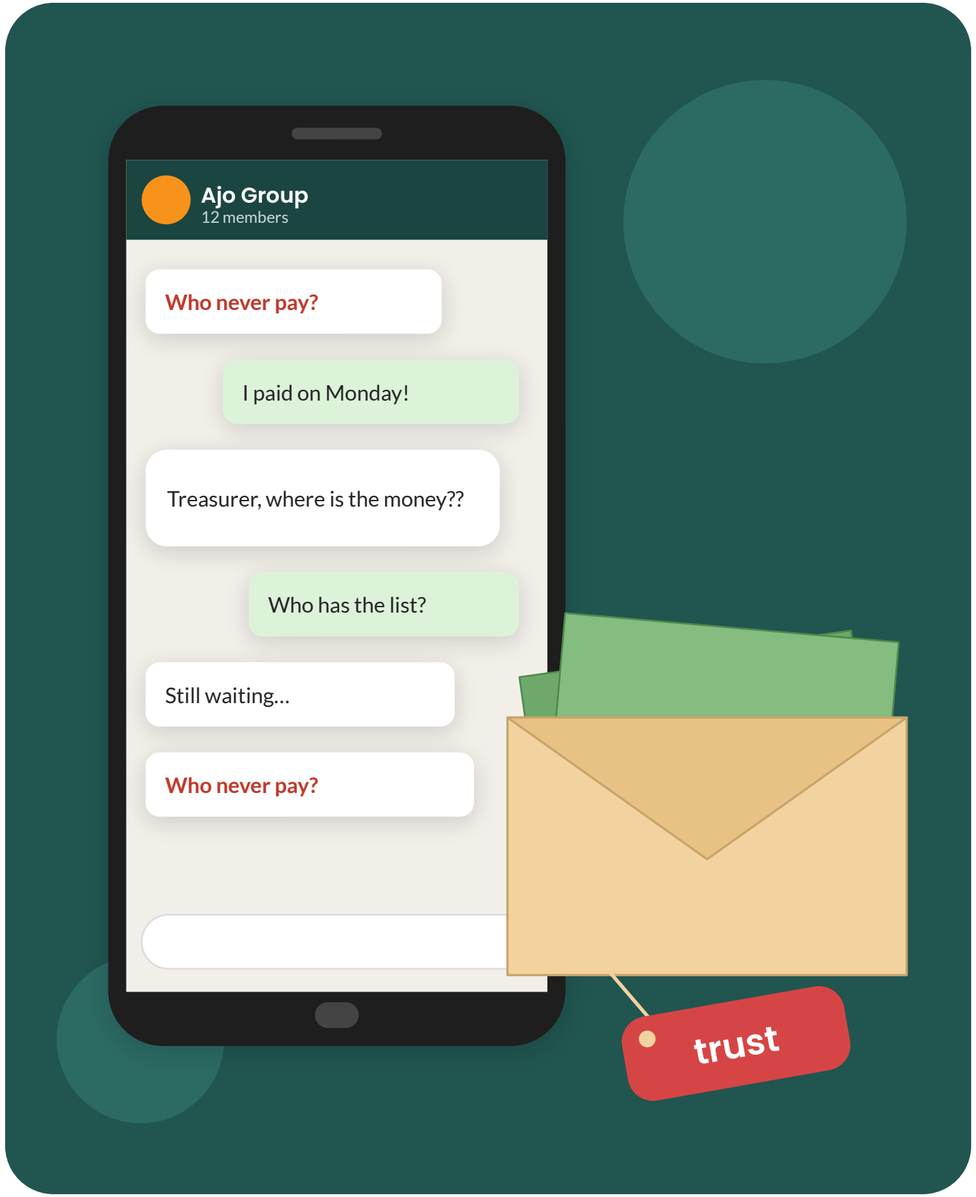

Ajo works. The trust doesn't.

28.0% of Nigerian adults saved through a savings club or a person outside the family in 2024, up from 24.7% in 2021. [Global Findex 2025, World Bank]

11.7M adults use a savings group and **13.1M** use a savings/thrift collector. [EFInA A2F 2023, Table 1]

Where it breaks

- One treasurer holds the cash and the records live in a chat, so if the organiser disappears, everyone loses.
- Members who've already collected can stop paying, and the group has no recourse.

01. Join by link

Members join from one invite link and post one contribution as collateral.

02. Auto-payout

The last contribution of each round **pays the pot automatically** in the same transaction.

03. Missed a round

If someone misses a round, anyone can settle it after the deadline: their collateral covers it and they're publicly flagged.

The solution

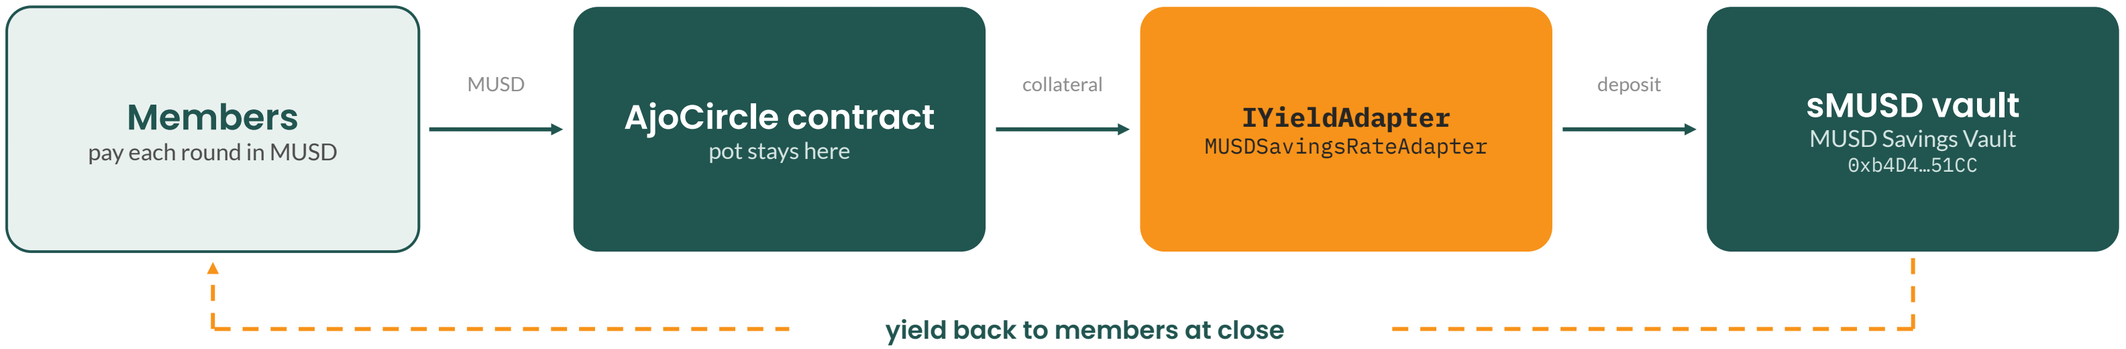

AjoCircle: the same circle, enforced by code

Your community's ajo, run by a smart contract on Mezo, with every contribution held in **MUSD** (BTC-backed dollars).

Create → Join → Contribute → Close

How it works

Mezo / MUSD integration

Every circle is MUSD demand

MUSD is the unit for every contribution, pot and collateral deposit, so each circle creates recurring MUSD demand and transfers.

Idle collateral earns

Idle collateral is routed through `IYieldAdapter` to the **MUSD Savings Vault (sMUSD)**, and yield is shared back to members at close.

Safe by design

The pot is never routed, so payouts are never delayed, and a principal shortfall reverts.

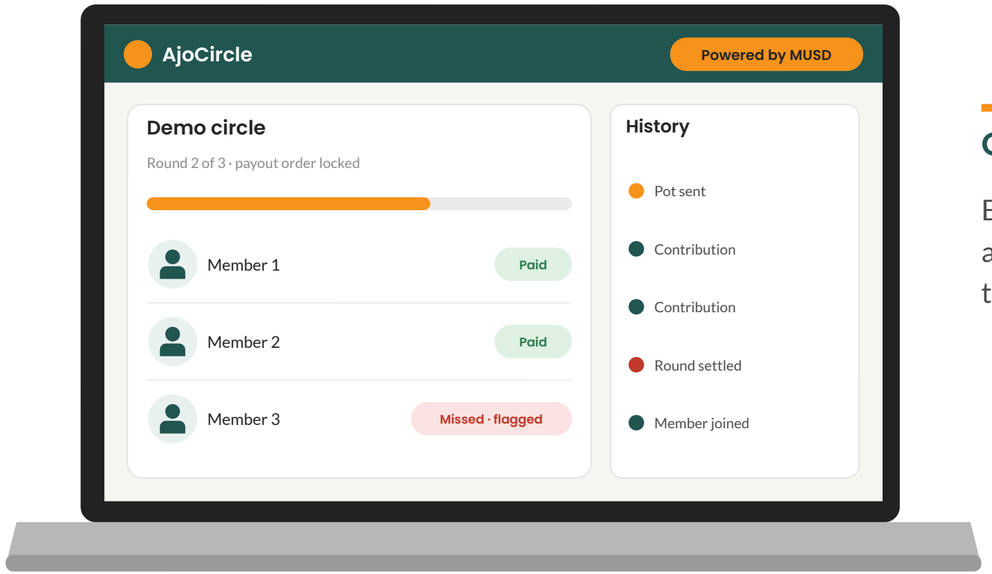

Testnet: native MUSD; mainnet: sMUSD yield adapter (fork-tested)

Demo

Live on Mezo testnet today

Shown in the demo

Create a circle, join by link, contribute, the auto-payout, and settling a missed round.

Onchain history

Every action emits an onchain event, and the History tab is rebuilt from the chain.

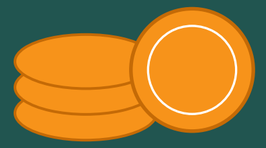

Deployed on Mezo testnet: contract `0x94A5014b54bF748660AC0D953De67416fe34ea2C`, with source verified on Sourcify.

Market

Nigeria first

- **133.3M** Nigerian adults (15+) in 2024, and **83.8%** own a mobile phone. [Global Findex 2025]
- **63.3%** of adults have an account in 2024, but **39% (40M)** still use informal financial services. [Findex 2025; EFInA A2F 2023]
- Saving through savings clubs is just as common across Sub-Saharan Africa: **28.1%** of adults in 2024. [Global Findex 2025]
- First users: market traders, church and alumni groups, and office ajo, which already pool money every week.

Roadmap

Next 3 milestones

Nov 2–15
Wave 2

Dec
Lagos pilot

Q1 2027
Reputation + audit

1. Wave 2 (Nov 2–15)

A WhatsApp/Telegram bot for reminders, “who's paid” and invite links, plus a mainnet deploy with the sMUSD yield switched on.

2. Pilot (Dec)

5 real ajo circles in Lagos (target of about 50 members) with naira ↔ MUSD on/off-ramp partners.

3. Q1 2027

A good-payer reputation score from repayment history, larger circles, VRF payout order, and an audit.

AjoCircle.
